The bonds of the universities with the companies and the private world

Continuous education and qualification and scientific research and technical consultancy are the two areas that will be fortifying the houses of studies in their narrow relation with the surroundings.

Invertia). - Like part of their tasks of continuous education, qualification and investigation, some universities of the country have risen with force the car of the bonds with the deprived world in their projects 2010. They are initiatives to confirm technical studies in foreign communities or to canalize professional practices.

Is your university one of the innovating classrooms of this year? It knows the most powerful folders in the matter of networks nails with the national and international surroundings.

Power efficiency

The U. Santa Maria is behind a powerful east initiative year: to offer to technical support to the Vines San Pedro de Atacama (VSPT), by means of financial feasibility studies for those projects that fortify the efficient use of energy for their productive processes; this, in agreement with the German Society for the Technical Cooperation (GTZ Chile) and the Program Country of Eficiencia Energética (PPEE) of the Ministry of Energy.

The agreement has a cronogram of diffusion of the results, to motivate the industry to talk back these experiences, being considered that Grupo VSPT is one of the 3 greater vitivinícolas exporter. The studies that the USM already has applied in San Pedro and Tarapacá, have allowed to detect 16 viable opportunities of efficiency.

In the GTZ they emphasize that the climatic change makes a more efficient use imperative of the energy and the clean technologies, matters in which Germany is one of the advanced countries more. For that reason it is that Javier Bitar, General Manager of the VSPT, thanks for the agreement, that takes them to be pioneering in “the application of power efficiency in the industry”.

“The sum of our capacities and our human resources will be a great contribution for all the companies and institutions that today accompany to us”, the director raises Jose Rodriguez, who adds that its institutional objective is to stand out “for being an institution that helps the companies to generate solutions technological”.

And he is that in he himself power scope, the university signed another agreement with the company/signature of electrical transmission Transelec through the Network of Studies of Transmisión (RET) to fortify the occupational field of its withdrawn and also academic futures. The objectives are the projects of investigation and the co-financing of studies.

Community College Santiago

Without doubts she is one of the great feats of this year. One is the Community College Santiago, first educative community of his type in the country, devised by the dean of the Faculty of Engineering of the Central U., Sergio Quezada, to fortify the technical education of superior level in the country through the convalidación of credits and one double degree with LaGuardia Community College of City University of New York.

Supplying races of two years by \$900 thousands to the year like Accounting, Programming, Telecommunications or Construction, the project looks for to form technicians of first level by means of a system of free schedules that allows them to work. In effect, in the U.S.A. “almost 49% of the superior education occur in the Community College”, says Quezada.

As it emphasizes his manager, one is a social project that it looks for to break the paradigm that “the technicians in Chile are bad”, educating them by means of not locked up laboratories and in four walls “as the great majority continues it doing”. The courses divided the 15 of March and make level the formativas deficiencies that bring the students of the institute or center by means of reinforcing and convalidación of credits.

“We percentage recognize the 100% for the races of execution and for the civilian. This means that the boy can get to later have to magíster or doctorate”, explains Quezada. And to a smaller cost, since in a formation of execution of three years, the technician already will have invested only \$1.8 million by formativa first stage.

Between the sponsorships for future labor agreements, the Power station already has talked with the ACHS, Polpaico and Soquimich, to the delay of which in September the Embassy of the U.S.A.I armed a committee enterprise. The next step, anticipates the dean, is to involve the State as today it happens in Germany; although not yet one considers to him to the new authority.

Dreams world

By the end of April, the Austral U. signed an agreement with World Dreams Valdivia, holding leader in hotel profession and entretención of the South zone. The agreement will allow to fortify the bond between the Faculty of Economic Sciences and the Hotel, Casino of Juegos and Spa de Dreams for practices and labor cupos to students of the races of Commercial Engineering and Audit and Administration of Companies of Tourism.

The students will arrive already at the labor world “knowing to do, that he is the main thing, and what we needed more nowadays in the country”, the general manager of Dreams raises, Marcelo Zamorano, since they will have access to the most modern processes of the industry the tourism during his professional formation in this hotel-school.

The director of the UACH, Victor Cubillos, indicates that “he interests to us to tie to us very many with the enterprise sector: one, so that the students make and thesis practical, and also so that the academic ones can contribute with investigation and consultancies”.

Qualification MIPE

All the efforts of cooperation do not follow the route of the great companies. By second followed year, Sercotec was allied with the School of Administration of the DuocUC to execute a program of qualification to craftsmen of Melipilla and tour-operators of the Valley of Maipo in competitiveness, plan of businesses and corporative image.

The improvement factories are gratuitous for the community microindustrialist and look for to reinforce the technological emprendimiento, certificando the acquired competitions. It is hoped to benefit to more than 9 thousand people in the Metropolitan Region.
