

Return Rate of Fall 2015 Students to Fall 2016 Excluding Fall 2015 and Spring 2016 Graduates

Nathan Dickmeyer
Institutional Research & Assessment
LaGuardia Community College
October 24, 2016

Fifty-nine percent of all degree students who did not graduate returned after two semesters from Fall 2015 to Fall 2016. The following figures and tables show the various return rates by full-time, part-time, gender, age, debt to the college at the end of Fall 2015, type (continuing, first-time, etc.) and admission application type (CUNY vs. direct).

Many combinations of these characteristics are also shown to note particular groups with advantages or disadvantages. In general, full-time students return at a much higher rate than students who were part-time in the fall 2015 semester. Women return at higher rates than men. Students under the age of twenty are more likely to return than older students. Students who ended the semester without a balance are more likely to return. Continuing students are about as likely to return as first-time and new transfers but more likely to return when comparing only part-time students.

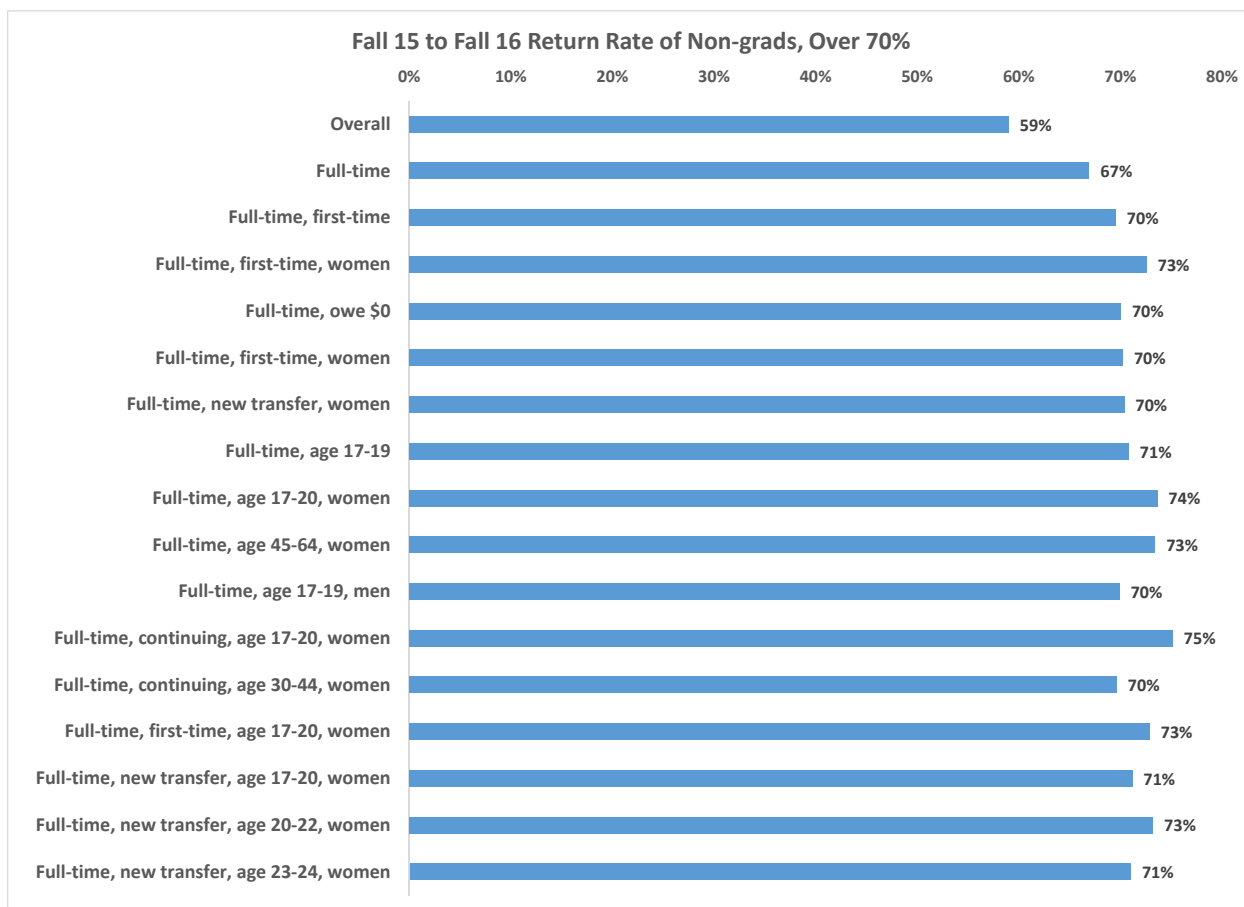

Figure 1

Figure 1 shows the more successful groups. Figure 2 shows the major categories of those groups with return rates below 50%. Figure 3 shows more precise groupings with return rates below 50%.

Figure 2

Some of the categories may be a result of internal distributions. Nevertheless, men were as likely to be part-time as women. Men were as likely to owe \$0 as women. Men were a little more likely to be age 30 to 44 and a little less likely to be 20 to 22. Direct admits were older, in general, than CUNY admits.
